

Our Mission

Utilize our design and manufacturing expertise to sustain a growing base of satisfied customers for power conversion magnetics products by achieving customer objectives for quality, on-time delivery and overall value.

Three Phase Drive Isolation Transformers

Transformers that meet your exact needs. Whether your application requires a power or distribution transformer, drive isolation transformer, 6-,12-, or 18-pulse transformer, phase shifting, harmonic cancellation, or a simple low cost auto-transformer we can deliver. Many options available such as electrostatic shield, voltage taps, 50/60hz ratings, enclosures and more. Ratings from 1KVA to 2MVA.

Harmonic Cancellation Transformers

Achieve harmonic mitigation with our zero-sequence filter transformers which can be connected directly across the line to localize the flow of harmful triplen harmonics at their origin, keeping them out of your upstream distribution transformers. Ratings from 15 amps to 2000 amps.

Inductors, Reactors & Chokes

AC and DC inductors for power supply or motor filter applications. Whether you are filtering a complex ac waveform or removing ripple from a DC power supply circuit, we will meet your needs. We'll custom design a product to meet your electrical and mechanical specifications. Ratings from 1 amp to 2000 amps (AC or DC).

Machine Tool Control Transformers

50hz and 60hz transformers to power your machinery and factory automation control circuits. Isolated or auto- types with taps, multiple windings and any style of terminations you require.

Specialty Magnetics Products

Buck/Boost Transformers, Constant Voltage Transformers, Filament & Plate Transformers, Rectifier Transformers, High Voltage Grid Transformers, plus Marine, Medical and Computer Grade Transformers. *Repair & Rebuild service is also available.*

We look forward to the opportunity to serve your magnetics requirements!
